Module 4 Lab Structure List.

Respiratory · Digestive · Urinary · Reproductive · Endocrine

DR. SHARILYN RENNIE

BIO 004 · MODULE 4 · PART C

Contents

How to use this list

This is a quick reference lab study guide. These are the lab structures and concepts to learn for the lab portion of the exam. Refer to the lab worksheets for the study questions that matter for the course. Treat this as the master list. Occasionally a lab sheet will not contain a structure seen here, so always cross reference against this list. Be prepared to identify structures on models, images, the cadaver, and slides from the microscope.

Some items are tagged with the module they are tested in. You meet the slide in an earlier module and are examined on it here.

Each tissue gets its own block. Tick the box by the name once you can identify it on the slide, write in its function and location, then work down the vertical list and tick each structure you can point to. Anything not in a list is context, not something you will be asked to identify.

READ THIS PART TWICE

This is an extensive list. It would be impossible to test on everything, but everything on this list is testable and you should prepare for it. On occasion I may add something to the list or remove something. Make sure you are in class, and have a person to connect with if you miss class, who can update you on any changes.

CHAPTER 1

The Respiratory System

MODELS, CADAVER, AND SLIDES

Follow the air. Every structure in this list sits somewhere along one continuous path, and if you can trace the path you can place any structure on it. The thoracic block at the end is the same cadaver dissection her master list asks for, so work the two together.

☐ External nose and nasal cavity

STRUCTURES TO IDENTIFY

- ☐ Root
- ☐ Bridge
- ☐ Dorsum nasi
- ☐ Apex
- ☐ Nares (nostrils)
- ☐ Nasal vestibule
- ☐ Nasal cavity
- ☐ Nasal septum
- ☐ Septal cartilage
- ☐ Perpendicular plate of the ethmoid
- ☐ Vomer
- ☐ Superior nasal concha
- ☐ Middle nasal concha
- ☐ Inferior nasal concha
- ☐ Superior meatus
- ☐ Middle meatus
- ☐ Inferior meatus
- ☐ Hard palate
- ☐ Soft palate
- ☐ Choanae

☐ Paranasal sinuses

Name the bone each sinus is named for and say where it drains.

STRUCTURES TO IDENTIFY

- ☐ Frontal sinus
- ☐ Ethmoidal air cells
- ☐ Sphenoidal sinus
- ☐ Maxillary sinus

☐ Pharynx

Name the epithelium of each region and say whether it carries air, food, or both.

STRUCTURES TO IDENTIFY

- ☐ Nasopharynx
- ☐ Pharyngeal tonsil
- ☐ Opening of the auditory tube
- ☐ Oropharynx
- ☐ Palatine tonsil
- ☐ Lingual tonsil
- ☐ Laryngopharynx
- ☐ Uvula
- ☐ Soft palate

☐ Larynx

Identify which single cartilage is elastic rather than hyaline, and which one is the only complete ring.

STRUCTURES TO IDENTIFY

- ☐ Thyroid cartilage
- ☐ Laryngeal prominence
- ☐ Cricoid cartilage
- ☐ Epiglottis
- ☐ Arytenoid cartilages
- ☐ Corniculate cartilages
- ☐ Cuneiform cartilages
- ☐ Cricothyroid ligament
- ☐ Vocal folds (true vocal cords)
- ☐ Vocal ligaments
- ☐ Vestibular folds (false vocal cords)
- ☐ Glottis
- ☐ Hyoid bone

☐ Trachea and bronchial tree

Be prepared to say which main bronchus is wider and more vertical, and why that matters.

STRUCTURES TO IDENTIFY

- ☐ Trachea
- ☐ Tracheal cartilages (C rings)
- ☐ Trachealis muscle
- ☐ Carina
- ☐ Right main (primary) bronchus
- ☐ Left main (primary) bronchus
- ☐ Lobar (secondary) bronchi
- ☐ Segmental (tertiary) bronchi
- ☐ Bronchioles
- ☐ Terminal bronchioles

☐ Lungs and pleurae

STRUCTURES TO IDENTIFY

- ☐ Right lung, superior lobe
- ☐ Right lung, middle lobe
- ☐ Right lung, inferior lobe
- ☐ Horizontal fissure
- ☐ Oblique fissure
- ☐ Left lung, superior lobe
- ☐ Left lung, inferior lobe
- ☐ Cardiac notch
- ☐ Lingula
- ☐ Apex of the lung
- ☐ Base of the lung
- ☐ Hilum of the right lung
- ☐ Hilum of the left lung
- ☐ Root of the lung
- ☐ Parietal pleura
- ☐ Visceral pleura
- ☐ Right pleural cavity
- ☐ Left pleural cavity

☐ The thorax on the cadaver

Memory trick for the fiber directions: hands in pockets is external, praying hands is internal.

STRUCTURES TO IDENTIFY

- ☐ Thoracic cavity
- ☐ Mediastinum
- ☐ Esophagus
- ☐ Diaphragm
- ☐ External intercostals
- ☐ Internal intercostals

Innervation of the diaphragm. ______________________________

Name the three structures that pass through the diaphragm and the cord level of each: T8 ______________________________ T10 ______________________________ T12 ______________________________

☐ Vessels and nerves of the thorax

Give the side and say whether each vessel is an artery or a vein before you name it.

STRUCTURES TO IDENTIFY

- ☐ Brachiocephalic trunk
- ☐ Right subclavian artery
- ☐ Left subclavian artery
- ☐ Right common carotid artery
- ☐ Left common carotid artery
- ☐ Right phrenic nerve
- ☐ Left phrenic nerve
- ☐ Right brachiocephalic vein
- ☐ Left brachiocephalic vein
- ☐ Right subclavian vein
- ☐ Left subclavian vein
- ☐ Right internal jugular vein
- ☐ Left internal jugular vein
- ☐ Right pulmonary artery
- ☐ Left pulmonary artery
- ☐ Right pulmonary veins
- ☐ Left pulmonary veins

☐ The respiratory zone and the alveolus

FUNCTION ______________________ LOCATION ______________________

SPECIAL STRUCTURES ______________________

STRUCTURES TO IDENTIFY

- ☐ Respiratory bronchiole
- ☐ Alveolar duct
- ☐ Alveolar sac
- ☐ Alveolus
- ☐ Type I alveolar cell
- ☐ Type II alveolar cell
- ☐ Alveolar macrophage
- ☐ Respiratory membrane
- ☐ Pulmonary capillary

☐ Respiratory slides

FUNCTION ______________________ LOCATION ______________________

SPECIAL STRUCTURES ______________________

STRUCTURES TO IDENTIFY

- ☐ Pseudostratified ciliated columnar epithelium
- ☐ Goblet cells
- ☐ Cilia
- ☐ Hyaline cartilage of the trachea
- ☐ Simple squamous epithelium of the alveolus
- ☐ Lung tissue, low power

Trace a breath of air from the nostril to an alveolus, naming every structure it passes.

____

____

CHAPTER 2

The Lymphatic System

MODELS, CADAVER, AND SLIDES

A one-way drainage network. Her master list names the spleen and the three tonsils outright; the vessels, the node, and the organ list come from the lymphatic chapter of this module. Learn the route first and the parts fall onto it.

☐ Lymphatic vessels, from the tissue spaces to the veins

Say which duct drains the upper right quadrant and which drains the rest of the body.

STRUCTURES TO IDENTIFY

- ☐ Lymphatic capillaries
- ☐ Lacteals
- ☐ Lymphatic collecting vessels
- ☐ Lymphatic valves
- ☐ Lymphatic trunks
- ☐ Right lymphatic duct
- ☐ Thoracic duct
- ☐ Cisterna chyli
- ☐ Subclavian veins
- ☐ Internal jugular veins

☐ The lymph node

FUNCTION ______________________ LOCATION ______________________

SPECIAL STRUCTURES ______________________

STRUCTURES TO IDENTIFY

- ☐ Capsule
- ☐ Cortex
- ☐ Medulla
- ☐ Afferent lymphatic vessels
- ☐ Efferent lymphatic vessels
- ☐ Hilum
- ☐ Cervical nodes
- ☐ Axillary nodes
- ☐ Inguinal nodes

☐ The lymphatic organs

Sort each one as a primary or a secondary lymphatic organ.

STRUCTURES TO IDENTIFY

- ☐ Red bone marrow
- ☐ Thymus
- ☐ Lymph nodes
- ☐ Spleen
- ☐ Tonsils
- ☐ MALT

☐ The spleen

FUNCTION ______________________ LOCATION ______________________

SPECIAL STRUCTURES ______________________

STRUCTURES TO IDENTIFY

- ☐ Spleen
- ☐ White pulp
- ☐ Red pulp

☐ The tonsils

Name the region of the pharynx each tonsil guards.

STRUCTURES TO IDENTIFY

- ☐ Pharyngeal tonsil
- ☐ Palatine tonsil
- ☐ Lingual tonsil

Which two lymphatic organs are primary, and what happens in each?

____

Trace a drop of interstitial fluid from a tissue space back to the bloodstream.

____

CHAPTER 3

The Alimentary Canal

THE CADAVER, THE TORSO MODEL, AND SLIDES

One continuous tube from the mouth to the anus. Work the peritoneum first, because the folds are what you have to move aside to reach the organs, and then take the canal region by region.

☐ Body cavities, serous membranes, and the omenta

STRUCTURES TO IDENTIFY

- ☐ Abdominal cavity
- ☐ Pelvic cavity
- ☐ Peritoneal cavity
- ☐ Parietal peritoneum
- ☐ Visceral peritoneum
- ☐ Retroperitoneum
- ☐ Greater omentum
- ☐ Lesser omentum
- ☐ Falciform ligament
- ☐ Mesentery
- ☐ Mesocolon

Name the retroperitoneal structures. Memory device: SADPUCKER.

☐ The wall of the canal, in section

FUNCTION ______________________ LOCATION ______________________

SPECIAL STRUCTURES ______________________

STRUCTURES TO IDENTIFY

- ☐ Mucosa
- ☐ Epithelium
- ☐ Lamina propria
- ☐ Muscularis mucosae
- ☐ Submucosa
- ☐ Submucosal plexus
- ☐ Muscularis, inner circular layer
- ☐ Muscularis, outer longitudinal layer
- ☐ Myenteric plexus
- ☐ Serosa
- ☐ Adventitia
- ☐ Lumen

☐ Mouth, pharynx, and esophagus

Say which end of the esophagus carries an adventitia rather than a serosa.

STRUCTURES TO IDENTIFY

- ☐ Oral cavity
- ☐ Hard palate
- ☐ Soft palate
- ☐ Uvula
- ☐ Fauces
- ☐ Palatine tonsil
- ☐ Lingual tonsil
- ☐ Nasopharynx
- ☐ Oropharynx
- ☐ Laryngopharynx
- ☐ Esophagus
- ☐ Esophageal hiatus
- ☐ Upper esophageal sphincter
- ☐ Lower (cardiac) esophageal sphincter

☐ The stomach

The stomach carries one more muscle layer than the rest of the tube. Name it and give its position.

STRUCTURES TO IDENTIFY

- ☐ Cardiac region
- ☐ Fundus
- ☐ Body
- ☐ Pyloric region
- ☐ Pyloric antrum
- ☐ Pyloric canal
- ☐ Pylorus
- ☐ Pyloric sphincter
- ☐ Cardiac sphincter
- ☐ Lesser curvature
- ☐ Greater curvature
- ☐ Gastric rugae
- ☐ Gastric pits
- ☐ Gastric glands
- ☐ Muscularis, oblique layer
- ☐ Muscularis, circular layer
- ☐ Muscularis, longitudinal layer

☐ The small intestine

FUNCTION ______________________ LOCATION ______________________

SPECIAL STRUCTURES ______________________

STRUCTURES TO IDENTIFY

- ☐ Duodenum
- ☐ Major duodenal papilla
- ☐ Jejunum
- ☐ Ileum
- ☐ Ileocecal valve
- ☐ Ileocecal sphincter
- ☐ Mesentery
- ☐ Circular folds (plicae circulares)
- ☐ Villi
- ☐ Lacteal
- ☐ Microvilli (brush border)

- [ ] **The large intestine**

Name the three features that belong to the large intestine and to no other part of the canal.

STRUCTURES TO IDENTIFY

- [ ] Cecum
- [ ] Vermiform appendix
- [ ] Ascending colon
- [ ] Hepatic flexure (right colic flexure)
- [ ] Transverse colon
- [ ] Splenic flexure (left colic flexure)
- [ ] Descending colon
- [ ] Sigmoid colon
- [ ] Rectum
- [ ] Anal canal
- [ ] Internal anal sphincter
- [ ] External anal sphincter
- [ ] Teniae coli
- [ ] Haustra
- [ ] Omental appendices

Trace a bite of food from the mouth to the anus, naming every region it passes through.

___

___

CHAPTER 4

The Accessory Digestive Organs

THE CADAVER, THE TORSO MODEL, AND SLIDES

The organs that sit alongside the tube and empty into it. Two questions on this sheet are hers outright: the fetal remnant behind the ligamentum teres, and the path of bile.

- [ ] **The tongue and the salivary glands**

Give the location of each of the three large salivary glands and say where its duct opens.

STRUCTURES TO IDENTIFY

- [ ] Tongue
- [ ] Lingual frenulum
- [ ] Papillae
- [ ] Intrinsic tongue muscles
- [ ] Extrinsic tongue muscles
- [ ] Parotid gland
- [ ] Submandibular gland
- [ ] Sublingual gland

- [ ] **The liver**

STRUCTURES TO IDENTIFY

- [ ] Right lobe
- [ ] Left lobe
- [ ] Quadrate lobe
- [ ] Caudate lobe
- [ ] Falciform ligament
- [ ] Ligamentum teres (round ligament)
- [ ] Lesser omentum

Ligamentum teres. It is the remnant of which fetal structure? ____________________

- [ ] **Liver tissue, on the slide and the model**

FUNCTION ____________________ LOCATION ____________________

SPECIAL STRUCTURES ____________________

STRUCTURES TO IDENTIFY

- [ ] Hepatocytes
- [ ] Hepatic laminae
- [ ] Hepatic sinusoids
- [ ] Bile canaliculi
- [ ] Portal triad
- [ ] Bile duct
- [ ] Branch of the hepatic artery
- [ ] Branch of the hepatic portal vein
- [ ] Central vein

☐ The gallbladder and the biliary tree

STRUCTURES TO IDENTIFY

- ☐ Gallbladder
- ☐ Fundus of the gallbladder
- ☐ Body of the gallbladder
- ☐ Neck of the gallbladder
- ☐ Right hepatic duct
- ☐ Left hepatic duct
- ☐ Common hepatic duct
- ☐ Cystic duct
- ☐ Common bile duct
- ☐ Hepatopancreatic ampulla
- ☐ Major duodenal papilla
- ☐ Sphincter of Oddi

☐ The pancreas

Say which part of the pancreas is exocrine and which is endocrine, and which duct joins the common bile duct.

STRUCTURES TO IDENTIFY

- ☐ Head of the pancreas
- ☐ Body of the pancreas
- ☐ Tail of the pancreas
- ☐ Main pancreatic duct
- ☐ Accessory pancreatic duct
- ☐ Hepatopancreatic ampulla
- ☐ Major duodenal papilla
- ☐ Acini
- ☐ Pancreatic islets

Trace a drop of bile from the hepatocyte that made it to the duodenum.

CHAPTER 5

The Urinary System

KIDNEY MODEL, CADAVER, AND SLIDES

Her master list runs this system in five steps: the gross kidney, its vasculature, the renal corpuscle, the renal tubule, then the two traces. Follow it in that order and the two traces answer themselves.

☐ Gross anatomy of the urinary system

Say which kidney sits lower and why.

STRUCTURES TO IDENTIFY

- ☐ Right kidney
- ☐ Left kidney
- ☐ Suprarenal (adrenal) gland
- ☐ Renal capsule
- ☐ Renal cortex
- ☐ Renal medulla
- ☐ Renal column
- ☐ Renal pyramid
- ☐ Renal papilla
- ☐ Minor calyx
- ☐ Major calyx
- ☐ Renal pelvis
- ☐ Renal sinus
- ☐ Renal hilum
- ☐ Ureter
- ☐ Urinary bladder
- ☐ Urethra

☐ Vasculature of the kidney

STRUCTURES TO IDENTIFY

- ☐ Renal artery
- ☐ Arcuate artery
- ☐ Cortical radiate artery
- ☐ Afferent arteriole
- ☐ Efferent arteriole
- ☐ Peritubular capillaries
- ☐ Vasa recta
- ☐ Cortical radiate vein
- ☐ Arcuate vein
- ☐ Renal vein

☐ The renal corpuscle

FUNCTION ________________ LOCATION ________________

SPECIAL STRUCTURES ________________

STRUCTURES TO IDENTIFY

- ☐ Glomerulus
- ☐ Glomerular (Bowman's) capsule
- ☐ Parietal layer of the glomerular capsule
- ☐ Visceral layer of the glomerular capsule
- ☐ Podocytes
- ☐ Capsular space

☐ The renal tubule and the juxtaglomerular apparatus

Name the segments in the order the filtrate meets them.

STRUCTURES TO IDENTIFY

- ☐ Proximal convoluted tubule
- ☐ Loop of Henle, descending limb
- ☐ Loop of Henle, ascending limb
- ☐ Distal convoluted tubule
- ☐ Collecting duct
- ☐ Papillary duct
- ☐ Juxtaglomerular apparatus
- ☐ Macula densa cells
- ☐ Granular (juxtaglomerular) cells

☐ The bladder and urethra

STRUCTURES TO IDENTIFY

- ☐ Trigone
- ☐ Ureteral openings
- ☐ Internal urethral orifice
- ☐ Detrusor muscle
- ☐ Internal urethral sphincter
- ☐ External urethral sphincter
- ☐ Male urethra
- ☐ Female urethra

Trace the path of urine and filtrate from the proximal convoluted tubule to the outside of the body.

____

____

Trace the path of blood through the kidney, from the renal artery to the renal vein.

____

____

CHAPTER 6

The Male Reproductive System

PELVIS MODEL, CADAVER, AND SLIDES

Sort the structures into the gonad, the ducts, the accessory glands, and the supporting structures before you learn them individually. The trace at the end is hers, and it runs straight through the duct group.

☐ The scrotum and the testis

STRUCTURES TO IDENTIFY

- ☐ Scrotum
- ☐ Testis
- ☐ Cremaster muscle
- ☐ Dartos muscle
- ☐ Tunica vaginalis
- ☐ Tunica albuginea
- ☐ Lobules of the testis
- ☐ Seminiferous tubules
- ☐ Testicular artery
- ☐ Testicular vein
- ☐ Pampiniform plexus
- ☐ Spermatic cord
- ☐ Inguinal canal

☐ Testis tissue, on the slide

FUNCTION ______________________ LOCATION ______________________

SPECIAL STRUCTURES ______________________

STRUCTURES TO IDENTIFY

- ☐ Seminiferous tubule
- ☐ Interstitial (Leydig) cells
- ☐ Sustentacular (Sertoli) cells
- ☐ Developing sperm cells

☐ The duct system

Only one structure on this sheet produces sperm. Name it, then say what each of the others does with them.

STRUCTURES TO IDENTIFY

- ☐ Epididymis
- ☐ Ejaculatory duct
- ☐ Membranous urethra
- ☐ Vas deferens (ductus deferens)
- ☐ Prostatic urethra
- ☐ Spongy (penile) urethra

☐ The accessory glands

Say what each gland contributes to semen.

STRUCTURES TO IDENTIFY

- ☐ Seminal vesicles
- ☐ Prostate gland
- ☐ Bulbourethral glands

☐ The penis

STRUCTURES TO IDENTIFY

- ☐ Root
- ☐ Body
- ☐ Glans penis
- ☐ Prepuce
- ☐ Corpus spongiosum
- ☐ Corpora cavernosa
- ☐ Spongy (penile) urethra

☐ The pelvic vessels

STRUCTURES TO IDENTIFY

- ☐ Internal iliac artery
- ☐ External iliac artery
- ☐ Medial umbilical ligament
- ☐ Internal iliac vein
- ☐ External iliac vein

Medial umbilical ligament. It is the remnant of which fetal structure?

____

Trace the path of sperm from the seminiferous tubules to the outside of the body.

____

____

CHAPTER 7

The Female Reproductive System

PELVIS MODEL, CADAVER, AND SLIDES

The ligaments are the hard part of this sheet, so name what each one connects as you find it. The tract itself is short and runs in one direction, from the ovary to the vaginal orifice.

☐ The ovary and its attachments

Say what each ligament attaches the ovary to.

STRUCTURES TO IDENTIFY

- ☐ Ovary
- ☐ Ovarian ligament
- ☐ Suspensory ligament
- ☐ Broad ligament of the uterus
- ☐ Mesovarium
- ☐ Ovarian artery
- ☐ Ovarian vein

☐ Ovary tissue, on the slide

FUNCTION ______________________ LOCATION ______________________

SPECIAL STRUCTURES ______________________

STRUCTURES TO IDENTIFY

- ☐ Germinal epithelium
- ☐ Tunica albuginea
- ☐ Ovarian cortex
- ☐ Ovarian medulla
- ☐ Ovarian follicles
- ☐ Mature follicle
- ☐ Corpus luteum
- ☐ Corpus albicans

☐ The uterine tubes

Name the region where fertilization usually happens.

STRUCTURES TO IDENTIFY

- ☐ Fimbriae
- ☐ Infundibulum
- ☐ Ampulla
- ☐ Isthmus

☐ The uterus

Name the layer that sheds in menstruation and the layer that rebuilds it.

STRUCTURES TO IDENTIFY

- ☐ Fundus
- ☐ Body
- ☐ Cervix
- ☐ Uterine cavity
- ☐ Cervical canal
- ☐ Round ligament of the uterus
- ☐ Broad ligament of the uterus
- ☐ Uterosacral ligament
- ☐ Cardinal ligament
- ☐ Perimetrium
- ☐ Myometrium
- ☐ Endometrium

☐ The vagina and the vulva

STRUCTURES TO IDENTIFY

- ☐ Vagina
- ☐ Vaginal orifice
- ☐ Fornix
- ☐ Mons pubis
- ☐ Labia majora
- ☐ Labia minora
- ☐ Clitoris
- ☐ Urethral orifice
- ☐ Vestibule
- ☐ Perineum

☐ The pelvic vessels

STRUCTURES TO IDENTIFY

- ☐ Internal iliac artery
- ☐ External iliac artery
- ☐ Medial umbilical ligament
- ☐ Internal iliac vein
- ☐ External iliac vein

Medial umbilical ligament. It is the remnant of which fetal structure?

____

Trace the path of an oocyte from the ovary to the uterine cavity.

CHAPTER 8

The Endocrine System

TORSO MODEL, CADAVER, AND SLIDES

The endocrine glands are scattered, so this sheet is a tour of locations first. Her master list names the thyroid gland in the neck and the endocrine pancreas and the suprarenal glands in the abdomen; the rest come from the endocrine chapter of this module.

☐ Locating the glands

Give the location of each gland before you name it.

STRUCTURES TO IDENTIFY

- ☐ Hypothalamus
- ☐ Pituitary gland
- ☐ Pineal gland
- ☐ Thyroid gland
- ☐ Parathyroid glands
- ☐ Thymus
- ☐ Adrenal (suprarenal) glands
- ☐ Pancreas
- ☐ Ovaries
- ☐ Testes

☐ The pituitary gland

Say which lobe is nervous tissue and which is glandular epithelium.

STRUCTURES TO IDENTIFY

- ☐ Hypophysis
- ☐ Sella turcica
- ☐ Infundibulum
- ☐ Anterior lobe (adenohypophysis)
- ☐ Posterior lobe (neurohypophysis)

☐ The thyroid and parathyroid glands

STRUCTURES TO IDENTIFY

- ☐ Thyroid gland, right lobe
- ☐ Thyroid gland, left lobe
- ☐ Isthmus
- ☐ Parathyroid glands
- ☐ Trachea
- ☐ Larynx

☐ Thyroid tissue, on the slide

FUNCTION ______________________ LOCATION ______________________

SPECIAL STRUCTURES ______________________

STRUCTURES TO IDENTIFY

- ☐ Thyroid follicles
- ☐ Colloid
- ☐ Follicular cells
- ☐ Parafollicular (C) cells

☐ The adrenal gland

FUNCTION ______________________ LOCATION ______________________

SPECIAL STRUCTURES ______________________

STRUCTURES TO IDENTIFY

- ☐ Adrenal (suprarenal) gland
- ☐ Adrenal cortex
- ☐ Zona glomerulosa
- ☐ Zona fasciculata
- ☐ Zona reticularis
- ☐ Adrenal medulla
- ☐ Kidney

☐ The endocrine pancreas

Say which of these two clusters is endocrine and which is exocrine.

STRUCTURES TO IDENTIFY

- ☐ Pancreas
- ☐ Pancreatic islets
- ☐ Acini

Which gland sits on the superior pole of each kidney, and what are its two parts made of?

____

CHAPTER 9

Vessels of the Abdomen and Pelvis

CADAVER AND TORSO MODEL

Her master list groups these as arteries then veins, with the hepatic portal system kept separate. Learn the three unpaired branches of the abdominal aorta in order from the top, because their order is what the tag is testing.

☐ Arteries of the abdomen

Name the three unpaired visceral branches of the abdominal aorta in order from superior to inferior, and say what each one supplies.

STRUCTURES TO IDENTIFY

- ☐ Abdominal aorta
- ☐ Celiac trunk
- ☐ Left gastric artery
- ☐ Splenic artery
- ☐ Common hepatic artery
- ☐ Superior mesenteric artery
- ☐ Renal arteries
- ☐ Gonadal (testicular or ovarian) arteries
- ☐ Inferior mesenteric artery
- ☐ Right common iliac artery
- ☐ Left common iliac artery

☐ Arteries of the pelvis

STRUCTURES TO IDENTIFY

- ☐ Internal iliac artery
- ☐ External iliac artery
- ☐ Medial umbilical ligament

☐ Veins of the abdomen and pelvis

STRUCTURES TO IDENTIFY

- ☐ Inferior vena cava
- ☐ Renal veins
- ☐ Gonadal (testicular or ovarian) veins
- ☐ Right common iliac vein
- ☐ Left common iliac vein
- ☐ Internal iliac vein
- ☐ External iliac vein

☐ The hepatic portal system

Say what makes this a portal system, and name the two capillary beds the blood passes through.

STRUCTURES TO IDENTIFY

- ☐ Hepatic portal vein
- ☐ Splenic vein
- ☐ Superior mesenteric vein
- ☐ Inferior mesenteric vein
- ☐ Hepatic veins

Trace a molecule of glucose absorbed by the small intestine from the intestinal capillary to the right atrium.

____

____
