

Workbook: Accessory Digestive Organs

Week 5 workbook · BIO 004 Human Anatomy · Dr. Sharilyn Rennie · Solano Community College

A comprehensive workbook on the accessory organs of digestion: the salivary glands, the liver and gallbladder, and the pancreas. These organs do not transport food themselves but deliver enzymes, bile, and other secretions into the alimentary canal.

How to use this workbook: Read each question carefully and write your answer in the space provided. Work without looking up the answer first. Once you have written your answer, check it against the online workbook by clicking *Reveal* on that question. Star or circle anything you missed and come back to it later in the week.

Salivary glands · 3 questions

Q01 · DOK 1 · Recall

Name the three pairs of major salivary glands and where each opens.

Q02 · DOK 1 · Recall

What is in saliva, and what does each major component do?

Q03 · DOK 3 · Reason

Mumps is a viral infection of the parotid glands. Predict why patients with mumps have pain when chewing.

Liver · 4 questions

Q04 • DOK 1 • Recall

Where does the liver sit, and what are its functions in basic terms?

Q05 • DOK 1 • Recall

Name the lobes of the liver.

Q06 • DOK 2 • Compare

The liver has two sources of blood supply. Compare them.

Q07 • DOK 1 • Recall

What is a hepatic lobule, and what is the portal triad?

Gallbladder and biliary tree • 3 questions**Q08 • DOK 1 • Recall**

Where is the gallbladder, what does it do, and what is the path of bile?

Q09 • DOK 1 • Recall

What does bile do?

Q10 • DOK 3 • Reason

Gallstones can block the cystic duct or common bile duct. Predict the clinical consequences of each blockage.

Pancreas • 3 questions**Q11 • DOK 1 • Recall**

Where is the pancreas, and is it intra- or retroperitoneal?

Q12 • DOK 2 • Apply

The pancreas is both an exocrine and an endocrine gland. Describe each function and the structures that perform it.

Q13 · DOK 1 · Recall

How does pancreatic juice reach the duodenum?
