

# Team Survey Setup.

How the pieces fit: students open **team-survey.html** from a QR code or the pop-up on their class page, answer twelve questions one at a time, and the page posts their answers into a Google Form you own, which lands in a Google Sheet. You download that Sheet as CSV, drop it into the **Team Formation Engine** (Survey Balance tab), pick the section, and get team cards, a class list, and a printable roster. Connecting it takes about ten minutes, once.

## STEP 1 · ABOUT 8 MINUTES

### One form per class, starting from the one you have

Each class gets its own Google Form and its own Sheet, so a class's data never mixes with another's and nothing reorganizes across sections. Your existing **TBL Team Survey** becomes the Class 1 form; two copies become Class 2 and Class 3.

1. Open **TBL Team Survey** in the editor. On **On a team, I prefer to...** add a fourth option: **Encourage people and keep the mood positive**. Optionally add any of the four extra questions listed below. Delete Gender and English if you like; the page never sends them.
2. In Settings, confirm **Collect email addresses** is off and **Limit to 1 response** is off.
3. Rename the form **BIO 004 Team Survey · Class 1 Mon/Wed**. Responses tab, green Sheets icon, create its Sheet if it does not have one.
4. Three-dot menu, **Make a copy**. Name it **BIO 004 Team Survey · Class 2 Tue/Thu AM**. Open the copy, Responses tab, create its own Sheet.
5. Repeat for **Class 3 Tue/Thu Eve**.
6. You do **not** need a "Which class are you in?" question, because each class posts to its own form. The survey page still asks the class only when it cannot tell from the QR code or the class page, and it uses the answer to pick the right form.

**Optional extra questions**, all not required, add to each form you want them in: **How much anatomy or physiology coursework have you had before this class?** (Multiple choice: None yet, this is my first / Some, in high school or a general biology class / I have completed an anatomy or physiology course before). **Which of these describe you?** (Checkboxes: I am reliable about showing up and following through / I ask good questions / I am comfortable speaking up in a group / I notice when someone is lost and help them catch up / I like explaining things to other people / I keep the group on task / I bring calm when things get stressful). **What matters most to you on a team?** (Short answer). **Anything you want me to know?** (Short answer).

## STEP 2 · ABOUT 3 MINUTES

### Get the entry IDs

Do this once **for each of the three forms**; copies get their own entry IDs.

1. In the form editor, click the **three-dot menu** (top right) and choose **Get pre-filled link**.
2. Type any answer into **every** question, including the checkbox ones, then click **Get link** and **Copy link**.
3. Paste the link into a text editor. It contains pieces like `entry.1234567890=...`, one per question, **in the same order as the form**. Those numbers are the entry IDs.
4. The **FORM\_ID** is the long string in the form's own URL between `/d/e/` and `/viewform`.

## STEP 3 · ABOUT 2 MINUTES

### Connect the survey page

1. Open `team-survey.html` in the repo. Near the top of the script is a FORMS block with three entries: `'mw'` (Class 1, its id already filled in), `'tr-am'` (Class 2), and `'tr-eve'` (Class 3).
2. For Class 2 and Class 3, paste each copy's FORM\_ID into its `id`. Then, for all three, paste the entry IDs into that form's `entry` list, matching the key comments (name, degree, health, role, tech, social, avail, work, and the optional ones). Leave blank anything that form does not have.
3. Commit and push. Open the page on your phone, answer it once as a test, and confirm the row lands in the Sheet. Then delete that test row.

**Until FORM\_ID is filled in**, the page still works: at the end it offers an "Email my answers" button that opens a message to your Solano address with the answers as one CSV line, so nothing a student does tonight is lost.

## DATA RETENTION

### What students are told, and what to do about it

The survey page tells students their answers live in your course form, are used only to form teams, and that **the file is deleted once teams are final, at the close of add/drop**. That wording is on purpose: waiting until add/drop closes gives you the data if a late add or a run of drops means a team needs rebuilding in week two, and it still keeps a firm, dated promise. Deleting the moment teams are announced would leave you rebuilding blind.

1. After the last team change of the add/drop window, open the linked Sheet and **File, Move to trash**, then empty the trash in Drive.
2. Open the form, Responses tab, three-dot menu, **Delete all responses**. Then either delete the form or keep the empty shell for next term.
3. Delete any downloaded CSVs from your laptop's Downloads folder. The Team Formation Engine keeps nothing once the tab closes.
4. Keep the final rosters in Canvas groups only. That is the system of record, and it is where a roster belongs.

If you would rather promise same-day deletion, the only cost is that a week-two rebuild would need students to retake the survey. The retention wording lives in one sentence in `team-survey.html` and can be changed either way.

## ON THE DAY

### From Sheet to teams

1. In the linked Sheet: **File, Download, Comma-separated values**.
2. Open the **Team Formation Engine** from the faculty hub, Survey Balance tab, load the CSV. The column mapping fills itself from the question titles.
3. Leave Section on "All rows in the file" (each class has its own file), set team size, Generate. Re-roll if you want a different arrangement.
4. **Show on projector** for the announcement. **Print** for the roster and the alphabetical class list. **Download CSV** for the Canvas groups.
5. Anyone who did not finish the survey: add them by hand to the smallest team afterward. There is no paper version; the survey is on the class home page and the QR code only.
