Table rules and team score sheet

How the two boards work

1. Lay Board A cards face down on the left of the table and Board B cards face down on the right. Keep the two piles apart.
2. On your turn, turn over one card from the left and one card from the right.
3. If they belong together, say out loud why before you keep them. Keep the pair, score a point, and go again.
4. If they do not belong together, turn both back face down in the same spots and play passes to the next team.
5. When every pair is gone, the team holding the most pairs wins the round.

Streak scoring, optional

1. First match in a turn is worth 1 point, the second in a row is worth 2, the third in a row is worth 3, and so on.
2. A miss resets the streak and passes the turn.

Rule that makes it teach

1. A pair only counts if the team says the reason out loud. Another team may challenge it, and the instructor settles it from the answer key.
