

Workbook: Meninges, Ventricles, and CSF

Week 7 workbook · BIO 004 Human Anatomy · Dr. Sharilyn Rennie · Solano Community College

A comprehensive workbook on the protective coverings of the central nervous system: the three meninges, the dural reflections and venous sinuses, the ventricular system, and the production, circulation, and absorption of cerebrospinal fluid.

How to use this workbook: Read each question carefully and write your answer in the space provided. Work without looking up the answer first. Once you have written your answer, check it against the online workbook by clicking *Reveal* on that question. Star or circle anything you missed and come back to it later in the week.

Meninges · 4 questions

Q01 · DOK 1 · Recall

Name the three meninges from outside in, and describe each.

Q02 · DOK 1 · Recall

Name the spaces around the meninges and what is in each.

Q03 · DOK 1 · Recall

Name three major dural reflections (folds) and what each separates.

Q04 · DOK 1 · Recall

What are dural venous sinuses, and what do they do?

Ventricles and CSF · 5 questions

Q05 · DOK 1 · Recall

Name the four ventricles of the brain and how they connect.

Q06 · DOK 1 · Recall

What is the choroid plexus, and what does it do?

Q07 · DOK 1 · Recall

What does CSF do?

Q08 · DOK 2 · Apply

Trace the flow of CSF from production to absorption.

Q09 · DOK 3 · Reason

Hydrocephalus is the accumulation of excess CSF within the ventricular system, often from blockage of the cerebral aqueduct. Using CSF circulation anatomy, predict what would happen to the ventricles upstream of the block.
